[Determination of formaldehyde in adhesives](#)

Formaldehyde, also known as methanal, is an organic chemical compound and belongs to the aldehyde group of substances. Due to its versatile applicability, it can be found in a large number of different products. It is mainly used as an adhesive and binder in the construction materials and furniture industry.

[Determination of formaldehyde in adhesives](#)

[Adhesive Bonding is the process of joining two surfaces together, usually with the creation of a smooth bond. This may involve the use of glue, epoxy, or one of a wide range of plastic agents which bond either through the evaporation of a solvent or through curing via heat, time, or pressure.](#)
