The energy released during a flare is typically on the order of 10^{27} ergs per second.

Large flares can emit up to 10^{32} ergs of energy.

Solar Flares - NASA

Solar Flares - UCAR Center for Science Education

learning-zone : sun-space-weather : solar-flare

Flares occur when intense magnetic fields on the Sun become too tangled. Like a rubber band that snaps when it is twisted too far, the tangled magnetic fields release energy when they snap.

The energy emitted by a solar flare is more than a million times greater than the energy from a volcanic eruption on Earth!

Solar Flares - UCAR Center for Science Education
